

# FlashTrak Telematics Delivery Route Solution

## FlashLink BLE (Bluetooth Low Energy) Temperature & Humidity Data Logger

Ideal for couriers and delivery routes, this wireless monitoring solution provides real-time visibility of temperature, humidity and location during transport of perishable products in refrigerated vans, trucks and containers.

The logger sends data to a smartphone or tablet located in the driver's cab. The smart device uploads information to a web application where it can be viewed remotely. Graphs and CSV files are emailed directly from the mobile device or web application, and automatically archived in the cloud. The system sends alerts for out-of-range conditions.

- Real-time monitoring of temperature, humidity, location
- View data on mobile device up to ~100 feet / 30 meters away from logger
- No need to open the door and locate logger inside the vehicle
- Wirelessly transmits data and alerts to smart devices with app
- Customize settings: ID/name, logging interval, high/low alarm limits
- Email PDF graph or CSV file from mobile device
- Data stored in a cloud-based application
- View and analyze remotely to make cold chain management decisions
